DETAILED ACTION

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-13, drawn to a surgical instrument, classified in class 606, subclass 205.
 - II. Claims 14-18, drawn to a method of suturing an opening in tissue, classified in class 128, subclass 898.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different product, or (2) the apparatus as claimed can be used to practice another and materially different process of using the product. (MPEP § 806.05(e)). In this case the process as claimed can be used to practice another and materially different process, such as an apparatus that does not includes a pivot point between a box hinge. The method of invention II does not recite steps necessitating the need to provide a snag free box hinge for snagging suture, and therefore is not limited to be performed by the apparatus of invention I. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48 (b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48 (b) and by the fee required under 37 CFR 1.17 (i).

Art Unit: 3734

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).
